## Question 6.

Given 50 ml of liquid nitrogen, what is its volume at room
temperature and pressure?

| 1 atm |
| :--- |
| 300 K |
| 1.44 mol |
|  |
| Volume ? |
|  |
|  |

nitrogen
300K
1.44 mol

| $\mathrm{m}=\rho \mathrm{V}=(0.808 \mathrm{~g} / \mathrm{ml})^{*}(50 \mathrm{ml})=40.4 \mathrm{grams}$ | $\rho=0.808 \mathrm{~g} / \mathrm{ml}$ |
| :--- | :--- |
| $\mathrm{n}_{\text {nitrogen }}=40.4 / 28 \mathrm{~mol}=1.44 \mathrm{~mol}$ | 1 mol N |
| 2 | $=28 \mathrm{~g}$ |

$n_{\text {nitrogen }}=40.4 / 28 \mathrm{~mol}=1.44 \mathrm{~mol} \quad 1 \mathrm{~mol} \mathrm{~N}_{2}=28 \mathrm{~g}$

Calculate the volume at 1 atm, 300 K $\mathrm{V}=\mathrm{nRT} / \mathrm{P}=(1.44 \mathrm{~mol})\left(0.08206 \mathrm{~atm} * \mathrm{~L} /\left(\mathrm{mol}^{*} \mathrm{~K}\right)\right)(300 \mathrm{~K}) /(1 \mathrm{~atm})=35 \mathrm{~L}$

Volume of air + nitrogen $=2 L+35 L=37 L$
